

Bài 2: - Chạy và sửa lỗi

B1: Tạo project BankAccount

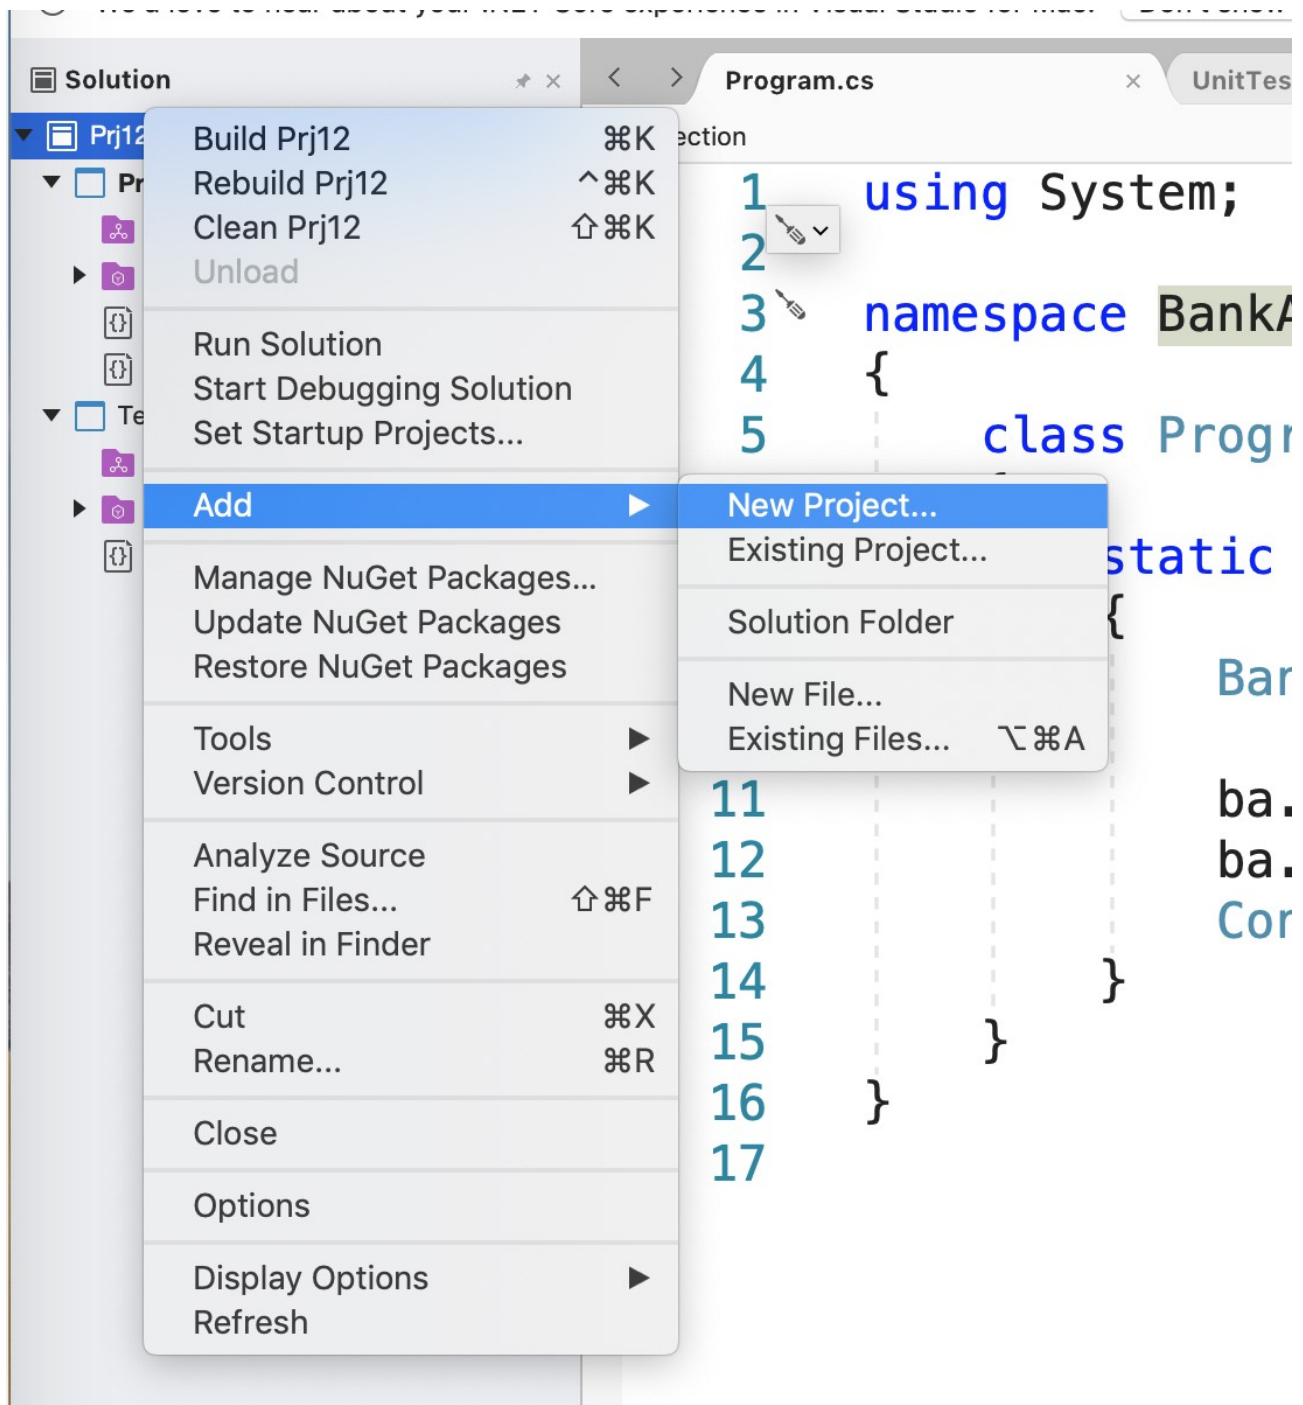

```
31 public void Debit(double amount)
32 {
33     if (amount > m_balance)
34     {
35         throw new ArgumentOutOfRangeException("amount");
36     }
37
38     if (amount < 0)
39     {
40         throw new ArgumentOutOfRangeException("amount");
41     }
42
43     //m_balance += amount; // intentionally incorrect code
44     m_balance -= amount;
45 }
46
47 public void Credit(double amount)
48 {
49     if (amount < 0)
50     {
51         throw new ArgumentOutOfRangeException("amount");
52     }
53
54     m_balance += amount;
55 }
56
57
58 }
59 }
```

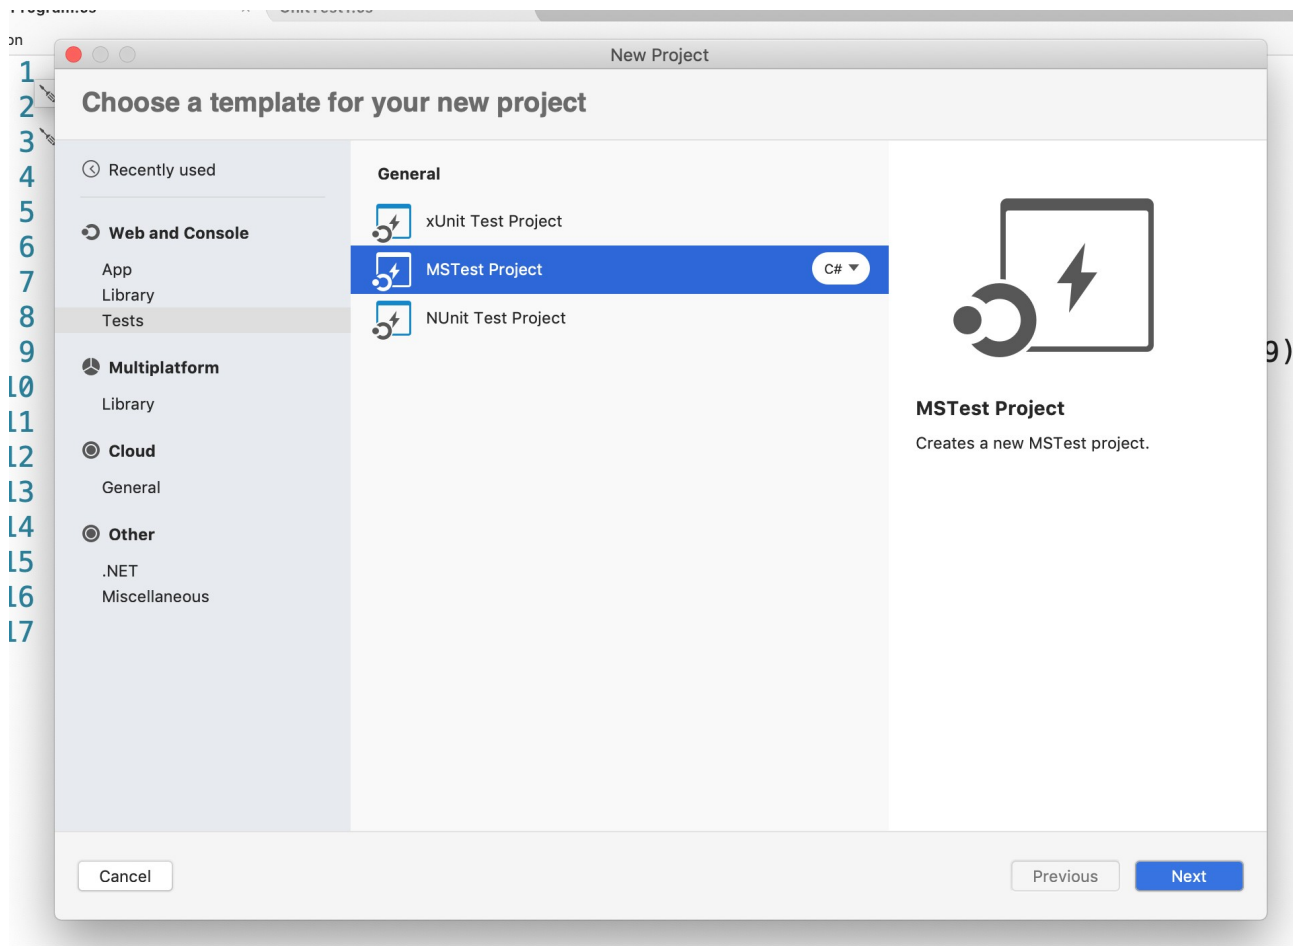

Trong Program.cs

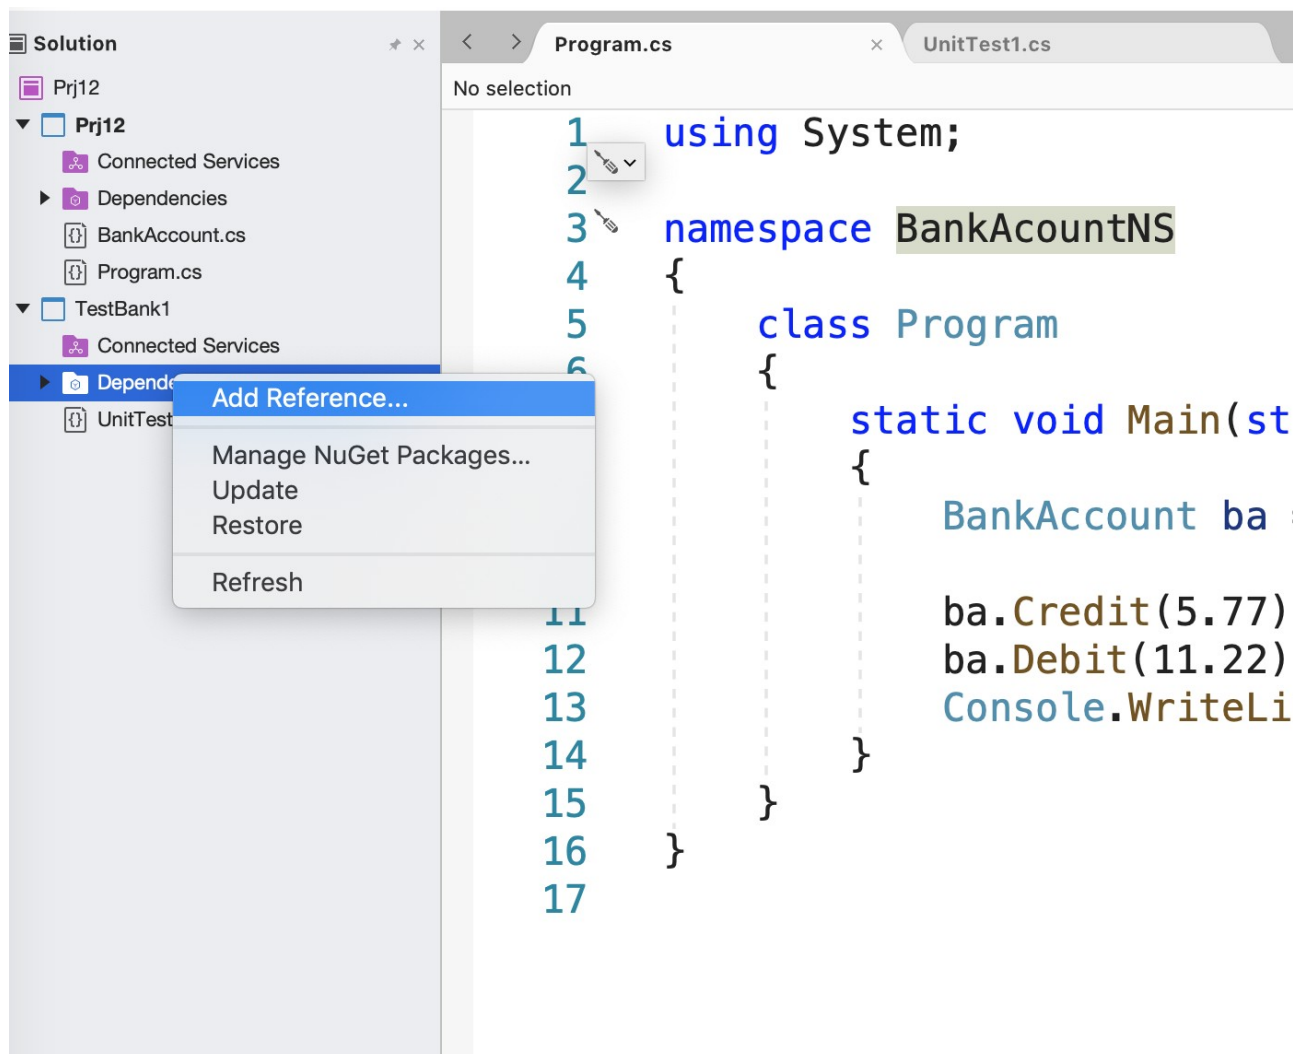

```
1 using System;
2
3 namespace BankAccountNS
4 {
5     class Program
6     {
7         static void Main(string[] args)
8         {
9             BankAccount ba = new BankAccount("Mr. Bryan Walton", 11.99);
10
11             ba.Credit(5.77);
12             ba.Debit(11.22);
13             Console.WriteLine("Current balance is ${0}", ba.Balance);
14         }
15     }
16 }
17 }
```

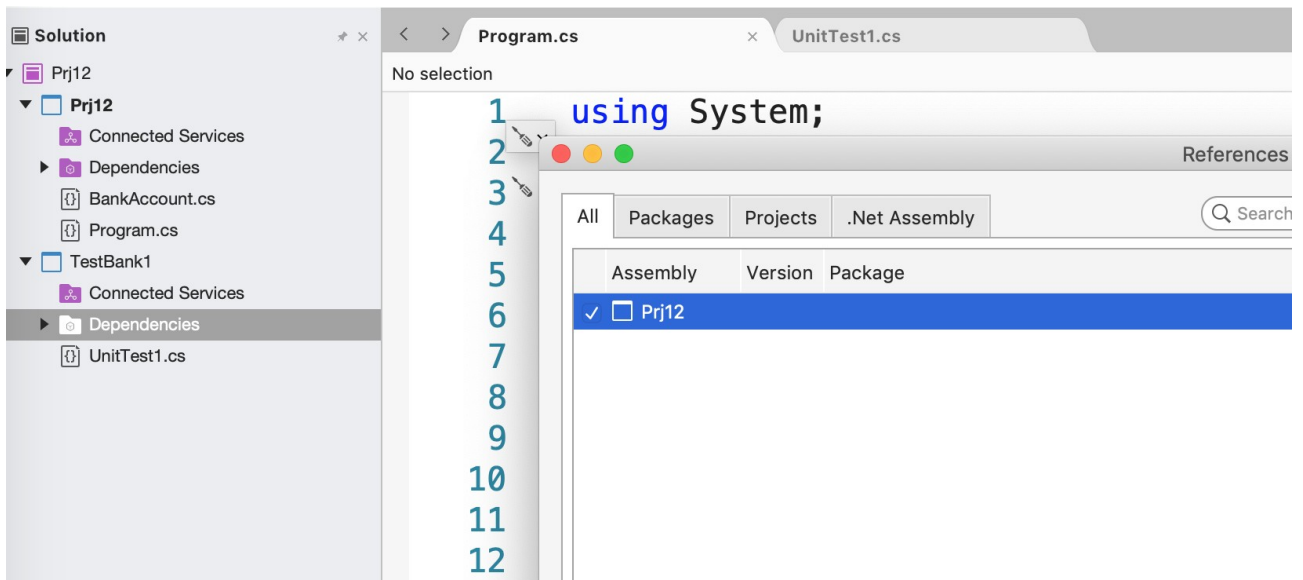

B2- Add vào solution 1 project Test

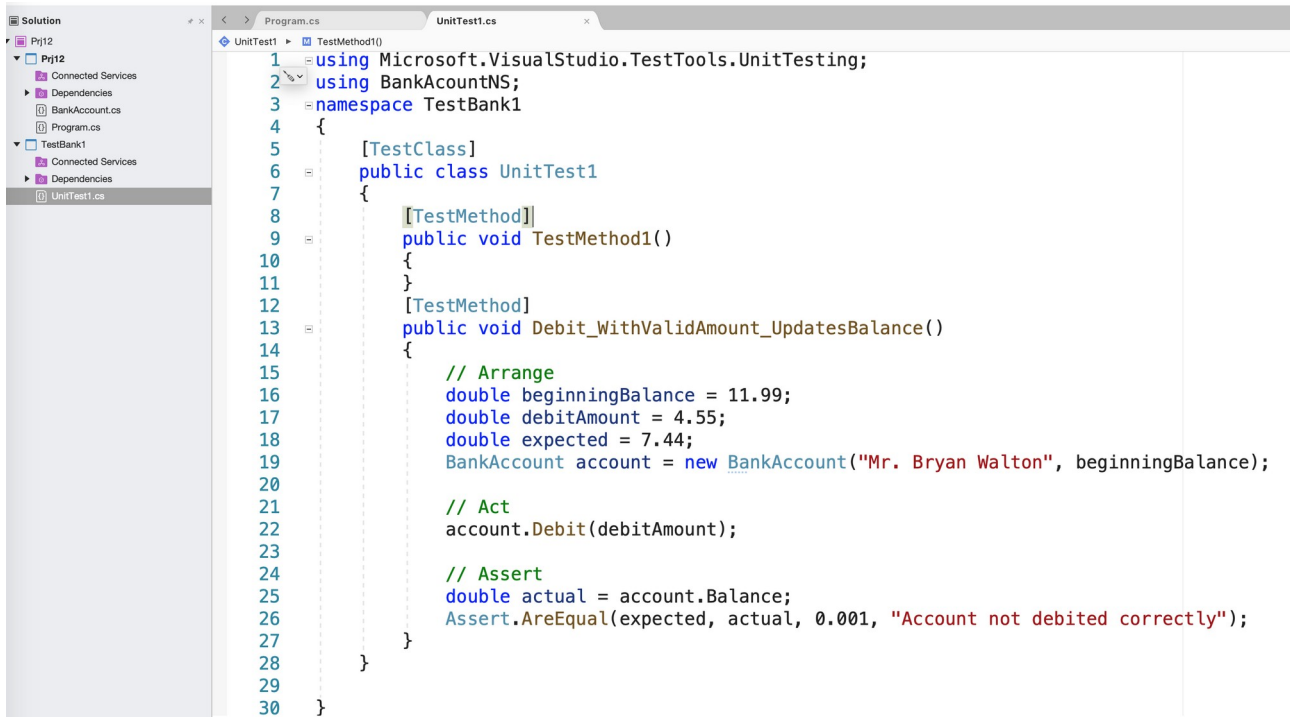

B3 – Add Project code vào Project Test

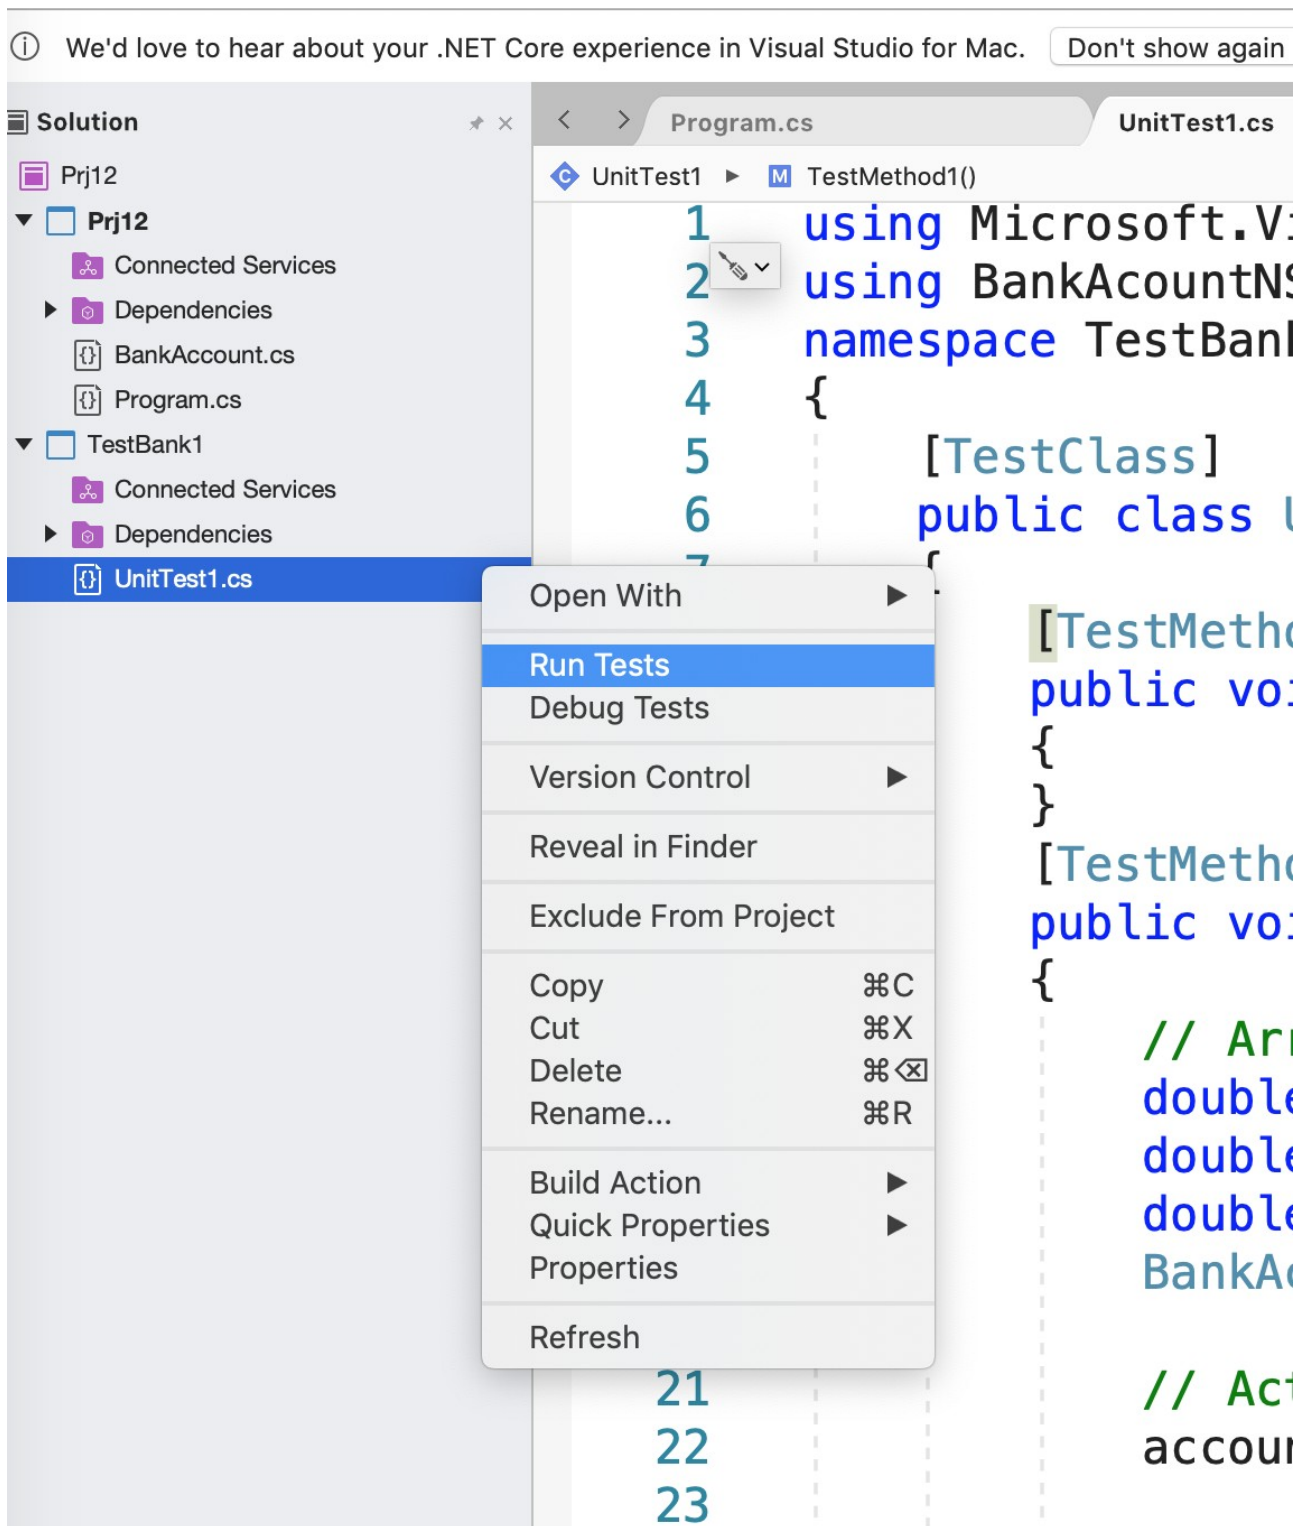

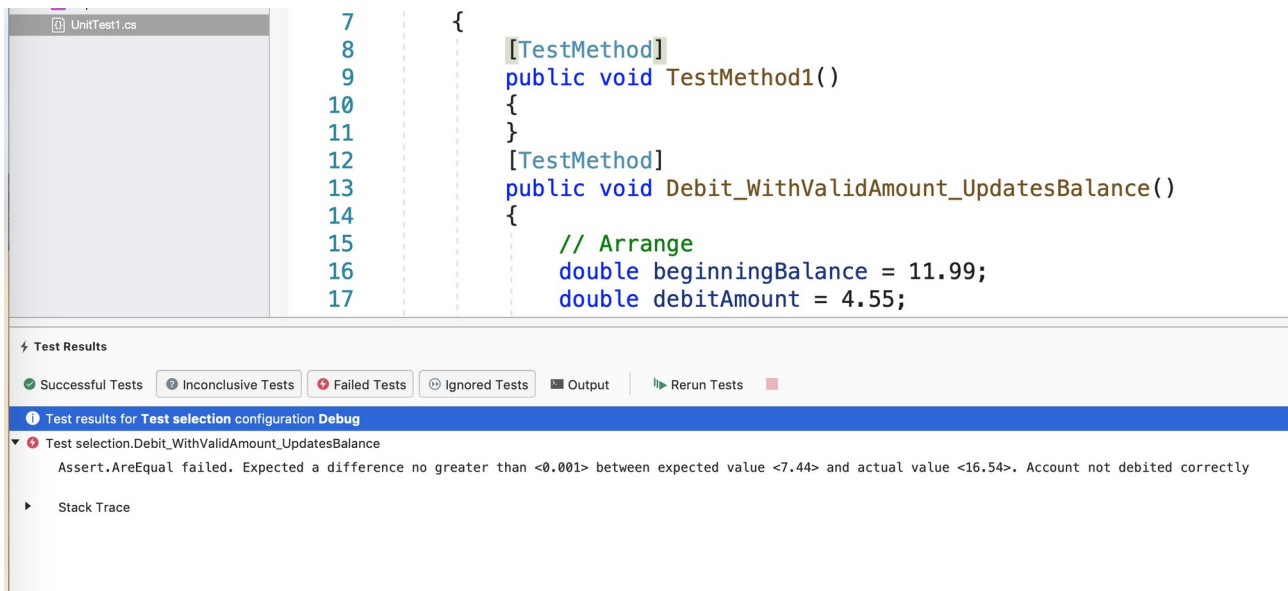

B4- Code

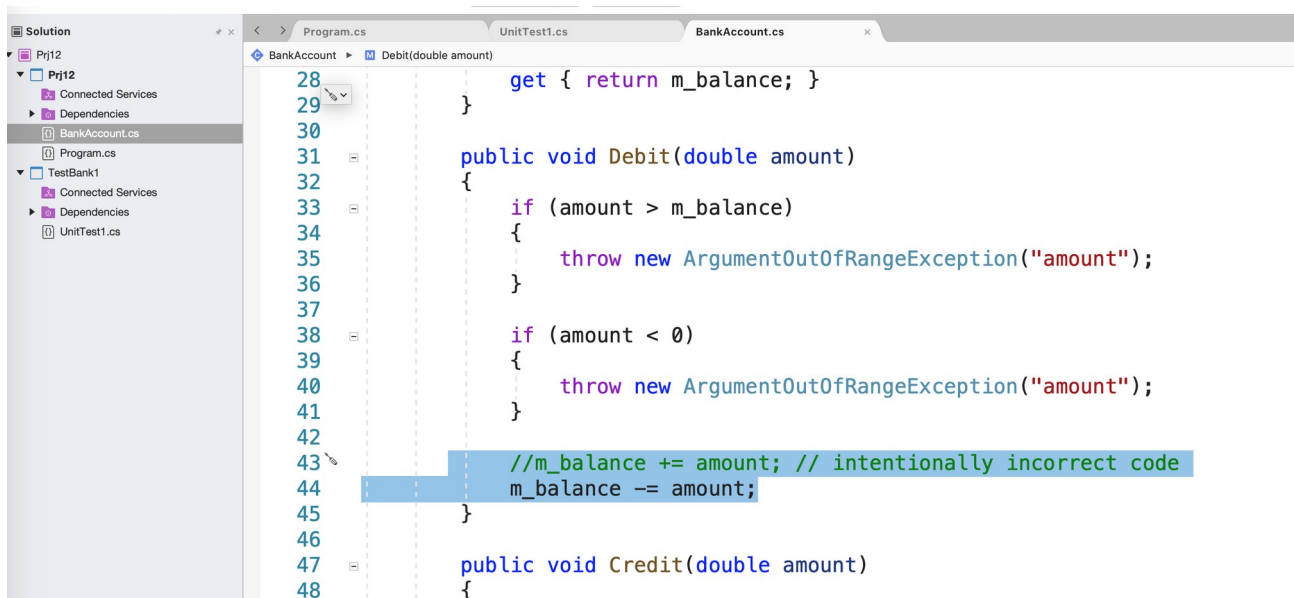

B5- Chạy

Và chương trình thông báo lỗi như sau:

B6- Sửa, build lại và chạy lại

Kết quả:

UnitTest1.cs

34 {
35 throw new Argume
36 }
37
38 if (amount < 0)
39 {
40 throw new Argume
41 }
42
43 //m_balance += amoun
44 m_balance -= amount;
